Global HR — Technical Guide

For developers maintaining **https://www.globalhrss.com**.

Companion doc: USER-GUIDE.md (staff / content editors).

---

1. Stack overview

Layer	Choice
Frontend	Static HTML + Tailwind CDN + vanilla JS (no bundler, no `package.json`)
Styles	`css/style.css` + per-page Tailwind config in `<head>`
Hosting	Cloudflare Workers static assets (`wrangler.toml`)
CMS	Google Sheets + Apps Script Web App
Contact	Formspree (`js/contact.js`)
Languages	EN / JA / KO / RU (`js/i18n.js`, `js/i18n-ko-ru.js`)
Theme	Light / dark (`localStorage` key `globalhr_theme`)

Production: **https://www.globalhrss.com** Legacy GitHub Pages:
`https://antthein.github.io/global-hr-website/`

---

2. Repository layout

```
Global_HR/
├── index.html, about.html, training.html, …
├── admin/                  # Staff login + job CMS UI
├── css/style.css           # All custom CSS
├── js/                     # Page and shared modules
├── assets/
│   ├── logo.png, favicons
│   ├── documents/          # Licence PDFs (blocked by _redirects)
│   ├── images/             # Curated photos, clients, training
│   │   └── new images/     # Staging only — NOT deployed
│   └── media/news/{id}/    # News / job media for Sheets paths
├── scripts/google-sheets/  # Apps Script + sheet templates (not deployed)
├── samples/                # Design experiments (not deployed)
├── wrangler.toml
├── _redirects
├── .assetsignore
├── README.md
├── TECHNICAL.md            # This file
└── USER-GUIDE.md
```

Deploy exclusions (`.assetsignore`)

Cloudflare **25 MiB per file** limit. Ignored from upload:

- `.git/`, `samples/`, `scripts/`, `README.md`
- `assets/images/new images/` (large dumps / staging)

Put production media under `assets/images/photos/`, `assets/images/clients/`, `assets/media/news/…`, etc.

---

3. Pages and routing

Public pages

File	Role
`index.html`	Home: hero, countries, industries, process, news panel, clients
`about.html`	Story, vision/mission, values, history, licences, leadership, offices
`testing-certification.html`	Training / testing pathways + gallery
`training.html`	Highlights (TWI, Rotary, CVT, SMF, arrival, gallery, updates)
`news.html`	Updates list/detail; job openings appear as feed items
`contact.html`	Formspree + WhatsApp; `?reason=licence` / `training` prefills
`subscribe.html`	Job-alert leads → Sheets **Leads** tab
`japan.html`	Japan recruitment pathways
`japan-titp.html`	TITP occupation categories

Redirects / stubs

File / rule	Behavior
`jobs.html`	→ `news.html` (jobs live in Updates)
`markets.html`	→ `index.html#home-countries`
`services.html`	→ `index.html#home-industries`
`_redirects`	`/assets/documents/*` → `contact.html?reason=licence` (302)

Japan / TITP are **not** in the primary mega-nav; reach by URL or cross-links.

Admin

Path	Role
`/admin/` (`admin/index.html`)	Staff login
`/admin/dashboard.html`	Job CRUD UI

`meta robots: noindex, nofollow` on admin pages.

---

4. Shared layout

Header / footer injection

Every public page should include:

```
<header id="siteHeader"></header>
<script src="js/site-nav.js?v=…"></script>
…
<footer id="siteFooter"></footer>
<script src="js/site-footer.js?v=…"></script>
```

For nested paths (`admin/`), set:

- `data-nav-prefix="../"` on `#siteHeader`
- `data-footer-prefix="../"` on `#siteFooter`

Nav items (from `js/site-nav.js`): Home · About · Training/Certification · Highlights · Contact Theme toggle + language control live in the nav.

Footer (`js/site-footer.js`): logo, tagline, Facebook/TikTok, quick links (incl. Updates, Job alerts, Staff login), Myanmar/Singapore contacts, EA licence line.

5. JavaScript modules

File	Role
`cms-config.js`	`window.GLOBAL_HR_CMS_API_URL` — Apps Script `/exec` URL
`sheets-news.js`	Fetch/cache news feed; media allowlist; local job fallbacks
`news-ui.js`	Shared card/detail HTML helpers
`news-page.js`	`news.html` list, detail, category filters
`home-news-panel.js`	Home “Latest updates” panel
`highlights-news.js`	Updates grid on `training.html`
`admin-api.js`	Session + POST actions to Apps Script
`admin.js`	Login + dashboard job table/modal
`contact.js`	Formspree submit, honeypot, reason prefills
`subscribe.js`	Lead signup → CMS `action: "lead"`
`clients-data.js` / `clients-page.js`	Homepage client logo marquee
`site-nav.js` / `site-footer.js`	Layout shells
`i18n.js` / `i18n-ko-ru.js`	Translations
`main.js`	Theme, hero slideshow, marquees, scroll reveal, stats, back-to-top, job-alert popup lazy-load
`job-alert-popup.js`	Delayed subscribe prompt
`training-programs.js`	Accordions + hash redirects for moved panels
`industries.js`	Industry / TITP accordion UX
`photo-lightbox.js`	Gallery lightbox

News cache

- Key: `sessionStorage` → `globalhr_news_v12`
- TTL: **10 minutes**
- After publishing news/jobs, hard-refresh or wait ~10 min; bump cache key in `sheets-news.js` if you need a forced invalidation for all visitors.

Media allowlist (`sheets-news.js`)

Only these render from the feed:

- Paths under `assets/…`
- Trusted YouTube / Vimeo URLs

Do not put arbitrary external image hosts in the sheet.

6. Brand / CSS

Inline Tailwind brand tokens (each page `<head>`):

Token	Hex
`brandBlue`	`#1a56db`

Token	Hex
`brandNavy`	`#1e3a8a`
`brandPurple`	`#4338ca`
`brandDark`	`#0f172a`
`brandLight`	`#f8fafc`

Custom CSS lives in `css/style.css` only (BEM-ish classes: `site-nav__*`, `home-hero__*`, `hero-news-panel__*`, etc.).

Design preference: **square photo corners** (avoid heavy rounding on photos).

Fonts: Inter + Noto Sans JP / KR (Google Fonts).

---

7. Internationalization

Key	Storage			
Language	`localStorage` → `globalhr_lang` (`en` \	`ja` \	`ko` \	`ru`)
Theme	`localStorage` → `globalhr_theme` (`light` \	`dark`)		

Usage in HTML:

- `data-i18n="key"` — text content
- `data-i18n-html="key"` — HTML content
- Page meta: `data-page-title` / `data-page-desc` on `<html>`

Add strings in `js/i18n.js` (EN + JA). KO/RU overlays in `js/i18n-ko-ru.js`.

Copy rule: recruitment intro only — avoid “dispatch / outsourcing” wording.

---

8. CMS (Google Sheets + Apps Script)

Full setup: ■SLOT0■.

Spreadsheet tabs

Tab	Purpose
Jobs	Job listings managed from `/admin/`
Admins	Up to 3 staff (`username`, `password_hash`, `active`)
Leads	Subscribe / job-alert signups
News	Homepage panel, Highlights, `/news.html`

Wire-up

- Deploy Apps Script as Web App (Execute as: Me; Access: Anyone).
- Paste `/exec` URL into `js/cms-config.js` → `GLOBAL_HR_CMS_API_URL`.
- After script edits: **Manage deployments** → **Edit** → **New version** → **Deploy**.

Public API (no login)

```
GET {WEB_APP_URL}?feed=news&status=active
```

Lead POST body shape (see SETUP.md):

```
{
  "action": "lead",
  "email": "…",
  "phone": "…",
  "source": "website",
  "campaign": "…",
  "consent": "yes"
}
```

News columns

`id | title | summary | body | image | media | category | published_at | status`

- `status`: `active` | `hidden`
- `published_at`: `YYYY-MM-DD` (newest first)
- `image`: one cover path
- `media`: paths or YouTube URLs, one per line or `|`-separated
- Local files: `assets/media/news/{id}/…` then commit + deploy (keep each file under 25 MiB; prefer YouTube for large video)

Job openings commonly use category `Job opening`.

Admin passwords

Never store plain passwords in the sheet or Git. Use Apps Script `setupAdminPassword("user", "password")`.

---

9. Contact form (Formspree)

Configured in `js/contact.js`:

```
FORMSPREE_ENDPOINT = https://formspree.io/f/xlgkbdpq
```

- Honeypot field `#cHp` / `_gotcha` — bots rejected client-side
- Query `?reason=licence` prefills licence request subject/message
- Training booking links use `contact.html?reason=training`

Change the endpoint only in Formspree dashboard + this file.

---

10. Deploy (Cloudflare)

`wrangler.toml`:

```
name = "global-hr"
[assets]
directory = "."
```

Cloudflare build settings:

Setting	Value
Build command	*(empty)*
Deploy command	`npx wrangler deploy`
Root directory	`/`

Cache busting

When you change CSS or JS, bump the query string on those assets only:

```
<link rel="stylesheet" href="css/style.css?v=YYYYMMDDx" />
<script src="js/main.js?v=YYYYMMDDx"></script>
```

Do **not** put `?v=` on HTML page links (`about.html`, etc.).

Large media

- Prefer YouTube in the News `media` column for videos over ~25 MiB
- Do not rely on `assets/images/new images/` in production (excluded)

---

11. Security checklist

Already in code / redirects:

- Single CMS URL from `cms-config.js` (no stale fallback URLs)
- Contact + subscribe honeypots; Apps Script rate limits on leads
- News media allowlist
- Licence PDFs not directly downloadable (`_redirects`)

Recommended Cloudflare **Transform Rules** → **Modify response header**:

Header	Value
`X-Content-Type-Options`	`nosniff`
`Referrer-Policy`	`strict-origin-when-cross-origin`
`Permissions-Policy`	`camera=(), microphone=(), geolocation=()`
`X-Frame-Options`	`SAMEORIGIN`

Optional CSP: see README.md — must allow Tailwind CDN, Google Fonts, Formspree, `script.google.com`, YouTube/Vimeo.

---

12. Local development

- Open `index.html` in a browser, **or** serve the folder with any static server.
- CMS calls need the live Apps Script URL in `cms-config.js` (CORS handled by Google).
- Admin: open `/admin/` against the same CMS URL.

No install / build step.

---

13. Common developer tasks

Add a new public page

- Copy an existing page shell (head tokens, i18n scripts, `#siteHeader` / `#siteFooter`).
- Add nav link in `js/site-nav.js` and/or footer in `js/site-footer.js`.
- Add `data-i18n` keys + strings in `i18n.js` / `i18n-ko-ru.js`.
- Bump `?v=` on changed JS/CSS.

Add homepage clients

Edit `js/clients-data.js` and place logos under `assets/images/clients/`.

Change hero slides

Edit the `data-hero-slideshow` slide markup in `index.html`; keep images optimized and under deploy limits.

Apps Script change

Edit `scripts/google-sheets/AppsScript-JobsApi.gs` in the Google project → new deployment version → test `/admin/` and news feed.

Seed / clean demo jobs

See SETUP.md: `node scripts/google-sheets/seed-live-jobs.mjs` (optional env `GLOBALHR_ADMIN_USER` / `GLOBALHR_ADMIN_PASS`).
